Professional Summary

Data Analytics enthusiast and Computer Science & AI student specializing in **data visualization, exploratory data analysis, and interactive dashboards** that transform complex datasets into clear, decision-ready insights. Proficient in Excel, Tableau, Python, SQL, and Pandas — with hands-on project experience from raw data through to polished dashboards.

Education

Bachelor of Technology (Computer Science and Artificial Intelligence) *2024 – 2028*
Newton School of Technology, Rishihood University

Projects

Bike Sales Dashboard | GitHub *2024*
Excel, Pivot Tables, Data Cleaning, Dashboard Design

- Built an interactive Excel dashboard visualizing bike sales data with **cleaned datasets**, pivot tables, and dynamic charts — enabling analysis by demographics, region, and product category.
- Applied data cleaning techniques including deduplication, null handling, and value normalization to ensure analysis-ready data before visualization.
- Designed a single-page dashboard with slicers for filtering by age bracket, commute distance, and income level, transforming raw transactional records into actionable sales insights.

Coffee Shop Sales Analysis | GitHub *2024*
Python, Pandas, EDA, Matplotlib, Seaborn

- Conducted exploratory data analysis on coffee shop sales data to uncover **revenue trends, peak hours, and best-selling products** across store locations.
- Leveraged Pandas for data wrangling — handling missing values, type casting, and time-series feature engineering (hour/day/month extraction) to enable temporal trend analysis.
- Visualized findings with Matplotlib and Seaborn using bar charts, heatmaps, and line plots, surfacing product mix and staffing recommendations from the data.

Car Sales Dashboard | GitHub *2024*
Tableau, KPI Metrics, Dashboard Design, Data Storytelling

- Built an interactive Tableau dashboard showcasing car sales insights from 2020–2021 with **YTD and MTD metrics**, average price analysis, and regional breakdown visualizations.
- Designed calculated fields for YTD vs. PYTD comparisons, enabling stakeholders to benchmark current performance against prior-year baselines at a glance.
- Delivered a filter-driven dashboard with drill-down capability by region, car model, and dealer — translating multi-dimensional data into executive-ready insights.

Skills

Data Analysis & Visualization: Excel (Pivot Tables, VLOOKUP, Power Query), Tableau, Matplotlib, Seaborn, Dashboard Design, EDA

Languages & Libraries: Python, SQL, Pandas, NumPy

Databases: MySQL, PostgreSQL

Tools: Git, GitHub, Jupyter Notebook, VS Code
